Patent No. 5658733
GENERAL INFORMATION:
APPLICANT: Cockerill, Franklin R.
APPLICANT: Kline, Bruce C.
APPLICANT: Mll, James R.
ITILE OF INVENTION: Detection of Isoniazid Resistant Strains
TITLE OF INVENTION: of M. Tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lundberg & Woessner

Patent No. 2851763
GENERAL INFORMATION:
APPLICANT: Heym. Beate
APPLICANT: Cole, Stewart
APPLICANT: Zhang, Ying
APPLICANT: Annore, Nadine
APPLICANT: Bodmer, Thomas
TILLE OF INVENTION: Rapid Detection of Antibiotic Resistance
TILLE OF INVENTION: In Mycobacterium Tuberculosis
NUMBER OF SEQUENCES: 66
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    : Finnegan, Henderson, Farabow, Garrett

Patent No. 6149936

GENERAL INFORMATION:
APPLICANT: SCHRADER, Jurgen
APPLICANT: GODECKE, Axel
TITLE OF INVENTION: DNA EXPRESSION VECTORS FOR USE IN THE GENE THERAPEUTIC
TITLE OF INVENTION: TREATMENT OF VASCULAR DISORDERS
FILE REFERENCE: 511169-2004
CURRENT APPLICATION NUMBER: US/09/123,624
CURRENT APPLICATION NUMBER: US/09/123,624
CURRENT APPLICATION NUMBER: 08/553,503
PRIOR FILING DATE: 1996-03-01
PRIOR FILING DATE: 1994-03-31
NUMBER OF SEQ ID NOS: 6
SECTIONER OF SEQ ID NOS: 6

An allquot of the amplified library was used to transduce E. coli Y1090 and phage DNA was usurified from a limid	lysate. The cDNA inserts were gel purified after EcoRI digestion and ligated into paluescript SK+. Aliquots of the ligation were used to transform E. coli pH5alpha which	were plated onto medium with X-gal for selection of recombinants." 163 a 267 c 221 g 111 t	13.28:	Similarity 62.2%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Foorly isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gill from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli T1090 and phage DNA was purified from a liquid
lysate. The cDNA inserts were gel purified after EcoRI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note--Vector: Biluescript SK+; Site_1: EcoR1; Site_2:
COR1; isolate: 28p2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gtil from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The CDNA inserts were gel purified after EcoR1
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DHSalpha which
were plated onto medium with X-gal for selection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      811
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           871

ECORI: isolate: 28p2 ; CDNA was prepared from polyA-
ECORI: isolate: 28p2 ; CDNA was prepared from polyA-
ECORI: isolate: 21p2 ; CDNA was ligated into Lambda gtil from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The CDNA inserts were gel purified after ECORI
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DHSalpha which
were plated onto medium with X-gal for selection of
